DETAILED ACTION

Allowable Subject Matter

1. **Renumbered claims 1-20** are allowed (e.g., **original claims 1-6, 9-11, 13-15 and 19-26**).

Original claims 7, 8, 12 and 16-18 have been canceled (see paper no. 10).

2. The following is an examiner's statement of reasons for allowance:

As per **original independent claims 1 and 24-26**, the cited prior art, either singly or in combination, fails to anticipate or render obvious a system and method for evaluating and generating analytical results based upon an interactively controlled method of compiling the query and acquisition processes used in obtaining input data, wherein a continuous value measure between two extreme values is determined as a characterization of the resultant, based on the evaluation of input data.

Graettinger et al., U.S. Patent No. 5,839,438, teaches of generating a medical diagnosis based upon a scoring system wherein a trained neural network relies upon previous case, patient and diagnostic data, together with specific immediate patient and physician input to devise a diagnosis. The art fails to explicitly focus on the aforementioned method of employing an interactive inquiry system that determines and uses a continuous value measure between two extreme values as a characterization of an analytical result based on the evaluation of input data.
